Fraud Detection

By Ravi Raya

Problem Statement

XYZ Insurance Company requires employees to process customer insurance applications, including data entry, manager approval, and policy generation. The system needs to implement fraud prevention measures by verifying customer information and tracking policy details like coverage amount, duration, and payment schedules.

Rules Created

- SLA
- Mail Integration & SSO
- Data Transform
- Routing
- Validation and Edit Validation
- Delegation
- Reports
- Gemini AI Integration
- Email Correspondence
