Description	An XYZ insurance company has Customers who apply for the Insurance policy every month/year. The employee of the company should be able to login and create policy for the customers depending on the insurance criteria. The employee should track the customer personal details and submit it to the Manager for Approval. Manager can approve or reject the application form. Once the Approval is provided, the employee can raise an Insurance policy against the customer. Fraud Detection can be possible through • Application form to claim the insurance – Customer may provide incorrect data. Need to check the appropriate Id and Address proofs after filling the form with personal details. • Insurance Amount Fraud – Customization of the Claim amount can't be done. The payment amount and the duration details to be recorded. Payments in monthly, quarterly, half yearly and yearly basis to be tracked with the amount to be paid respectively.
